

# WET ABRASIVE BLASTING SYSTEM

# A new blasting experience

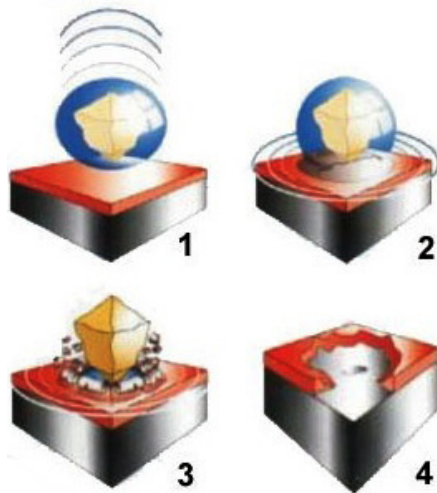

## Your benefits:

- Versatile: from gentle to powerful cleaning
- Economical in consumption of water and blasting media
- Useable at temperatures between 4°C and 50°C
- Work heights up to 200 meters
- Can also be used in EX-protected areas
- Dust emissions are reduced to a minimum
- Reduced set-up times and lower costs
- Less wear on nozzles and hoses

*Simply the most efficient.*

## How it works:

The decisive factor is the interaction of blasting media, water and pressure. Because these three factors can be metered separately and independently. Depending on the settings the blast can strike the surface as gently that you can clean a raw egg with it or it can be so powerful that a thick layer of paint will be removed.

### **Gentle cleaning and repair**

torbo systems have been widely deployed on many prestigious projects to restore monuments and building facades. torbo's gentle cleaning action restores stone and brickwork to its pristine glory. The flexible nature of the system allows for precise and specific finish requirements to be achieved, regardless of the surface condition or source material.

### **More power, less consumption**

torbo's advanced cleaning system is ideal for the repair and maintenance of ships and boats. Quick and reliable, torbo systems are used by Highways Contractors and Local Authorities for asbestos removals, bridge and infrastructure maintenance and repair.

# Applications

**Concrete**

**Bricks / Facades**

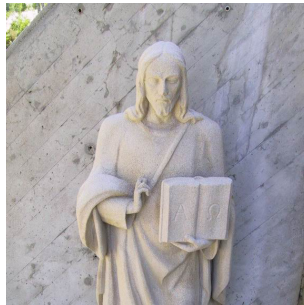

**Asbestos etc.**

**Graffiti**

**Offshore**

**Monuments**

**Steel**

**Wood**

**Ships**

**Fire damages**

**Petrochemical**

**Plastic / GRP**

All torbo devices are quality products made in Germany. That's why you should benefit from our experience, our technical know-how and our spare parts warehouse.

By selecting the settings, the accessories and the blasting media you can realize many different requirements with one device. That's why we offer various trainings for users - from beginners to refreshers.

You don't want to buy a device right now? Then you can use our rental service. We will advise you which is the right machine for your project, so you can benefit from our rental park and our support during the rental period.

To make sure that all our clients worldwide get the same reliable support, we have some great partners around the globe. If you like to find the partner who's next to you, please check our website.
